EDUCATION

University of Maryland

Bachelor of Science in Computer Science

College Park, MD

Graduated: 2026

EXPERIENCE

IBM

Software Engineer

July 2026 – Present

Baton Rouge, LA

- Developing and deploying **custom ServiceNow applications** on the Now Platform to streamline enterprise IT service management workflows for internal stakeholders.
- Automating business processes using **Flow Designer, Business Rules, and Script Includes** in JavaScript, reducing manual ticket handling and turnaround time.
- Building integrations between ServiceNow and external enterprise systems using **REST APIs and IntegrationHub**, ensuring reliable data flow across platforms.

Software Engineering Intern

FrontLine Insurance

June 2025 – August 2025

Orlando, FL

- Streamlined internal operations by engineering a full stack time management application resulting in a **20% reduction in admin overhead** for project hour allocation.
- Enhanced productivity by **30% by integrating AI-driven automation workflows** with **Windsurf**, successfully automating project management tasks and status updates.
- Ensured data integrity for sensitive insurance workflows by designing a normalized relational schema in **PostgreSQL** to handle employee logs and projects.

AI/ML Intern

Cognitive GeoInterpretation

May 2022 – August 2022

Tallahassee, FL

- **Optimized seafloor mapping** by developing Python-based data processing scripts reducing data interpretation time by **25%**.
- **Achieved 90% prediction accuracy** in analyzing unknown terrain by implementing and tuning **XGBoost machine learning models**.
- Developed data visualizations to show seafloor terrain predictions helping others see correlations between data.

PROJECTS

NutriVision | *Claude, IOS development, ML*

- Developed a nutrition tracking app that uses **AI-powered computer vision** through Meta glasses to identify food items in real time.
- Implementing **machine learning models** to analyze and estimate calories and nutritional information from visual food video.
- Providing to 100+ people to help accommodate their differing medical needs and tracking with their doctor.

Sign Language Detection Application | *scikit-learn, NumPy, Open-CV*

- **Achieved high-fidelity real-time recognition** of ASL by training a multi-class model on **2000+ labeled images**, optimizing for low-latency webcam input.
- **Increased model precision by 15%** by performing analysis of **Random Forest** and **Neural Network** architectures to find the most robust classifier for lighting conditions.
- Presented at a hackathon, guiding students through building, learning, and extending the application.

Clinical Billing Management System | *Python, Node.js, SQL*

- Built a clinical billing application that uses **optical character recognition** to read and extract data from documents and input into centralized healthcare management system.
- Developed an interface allowing doctors to review, edit and manage patient records with accurate date tracking.
- **Reduced billing processing time by 20%** by automating data entry and eliminating manual documents.
