# Mihir Konda

850-273-2335 | mihir.konda@gmail.com | https://github.com/mihircoding | https://www.mihirkondaportfolio.com/
U.S. Citizen | Open to Relocate

## Education

**University of Maryland** College Park, MD
*Bachelor of Science in Computer Science* *Graduated: December 2025*

## Experience

**IBM** July 2026 - present
*Software Engineer* *Baton Rouge, LA*

- Developing and deploying **custom ServiceNow applications** on the Now Platform to streamline enterprise IT service management workflows for internal stakeholders.
- Automating business process using **Flow Designer, Business Rules, and Scriupt Includes** in Javascript, reducing manual ticket handling and turnaround time.
- Building integrations between ServiceNow and external enterprise systems using **REST APIs and IntegrationHub,** ensuring reliable data flow across platforms.

**Software Engineering Intern** May 2024 - August 2024
*FrontLine Insurance* *Orlando, FL*

- Improved software reliability by collaborating with cross-functional teams to achieve **80% code coverage** on insurance claim logic.
- Reduced manual testing by developing a suite of automated end-to-end test scripts using **TypeScript** using **Playwright** for claim filing and policy creation.
- Accelerated development cycles by integrating automated test suites into the **Jenkins CI/CD pipeline**, identifying regressions prior to release.

**AI/ML Intern** May 2022 – August 2022
*Cognitive GeoInterpretation* *Tallahassee, FL*

- **Optimized seafloor mapping** by developing Python-based data processing scripts reducing data interpretation time by **25%**.
- **Achieved 90% prediction accuracy** in analyzing unknown terrain by implementing and tuning **XGBoost machine learning models**.
- Developed data visualizations to show seafloor terrain predictions helping others see correlations between data.

## Projects

**Kalshi Esports Arbitrage** | *Python, WebSockets, SciPy, pytest*

- Built a cross market arbitrage and market-making engine for **Kalshi and Polymarket esports.**
- Priced map outcomes with **SciPy model** and validated signals against the public trade and contract settlements.
- Shipped with pytest suite and published write up documenting where the model had edge and where market caught up.

**Market Simulation & backtester** | *Python, event driven design, market microstructure*

- Engineered an **event driven backtester** wired into a custom price time order book
- Built an order flow simulator that reproduced emergent microstructure from random flow.
- Designed clean separation across data, strategy, execution layers with lookahead-bias safeguards and full pytest coverage.

**NutriVision** | *Claude, IOS development, ML*

- Developed a nutrition tracking app that uses **AI-powered computer vision** through Meta glasses to identify food items in real time.
- Implementing **machine learning models** to analyze and estimate calories and nutritional information from visual food video.
- Providing to **100+ people** to help accommodate their differing medical needs and tracking with their doctor.
